

Myocardial revascularization: today & tomorrow

Pedro de Araújo Gonçalves, MD, PhD

Hospital de Santa Cruz, CHLO

Hospital da Luz, Luz-Saúde

Faculdade de Ciências Médicas – UNL

Associação Portuguesa de Intervenção Cardiovascular

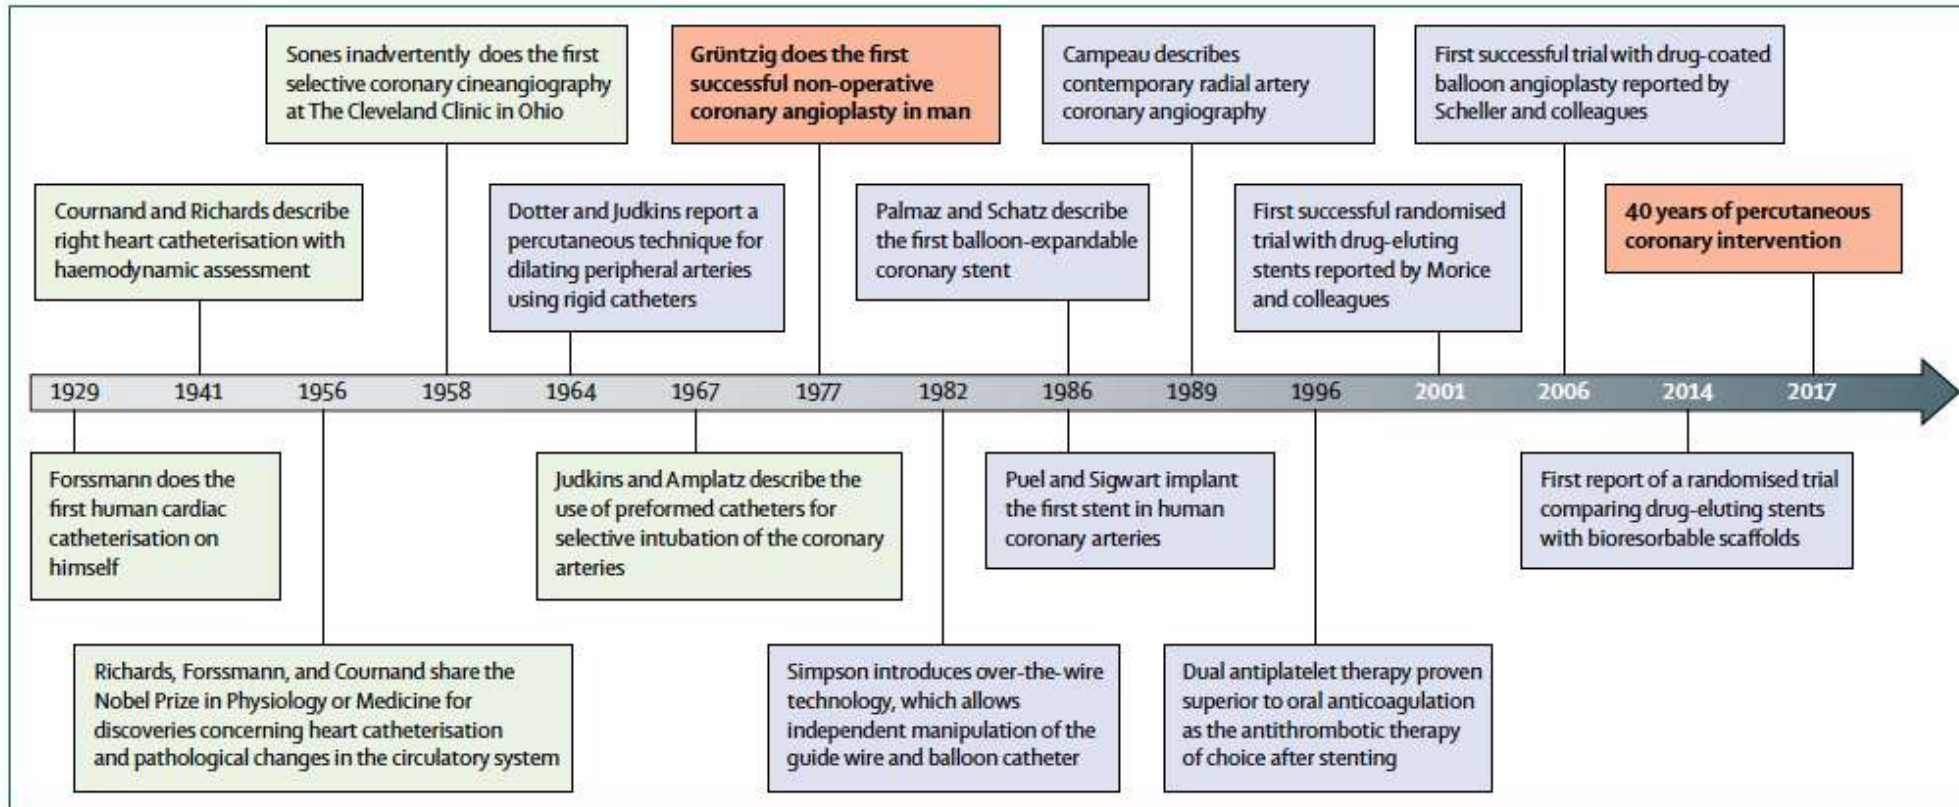

Past

Melvin P Judkins 1922 - 1985

1958 – Sones, 1st selective coronary angiography

1967 – Judkins, preformed catheters

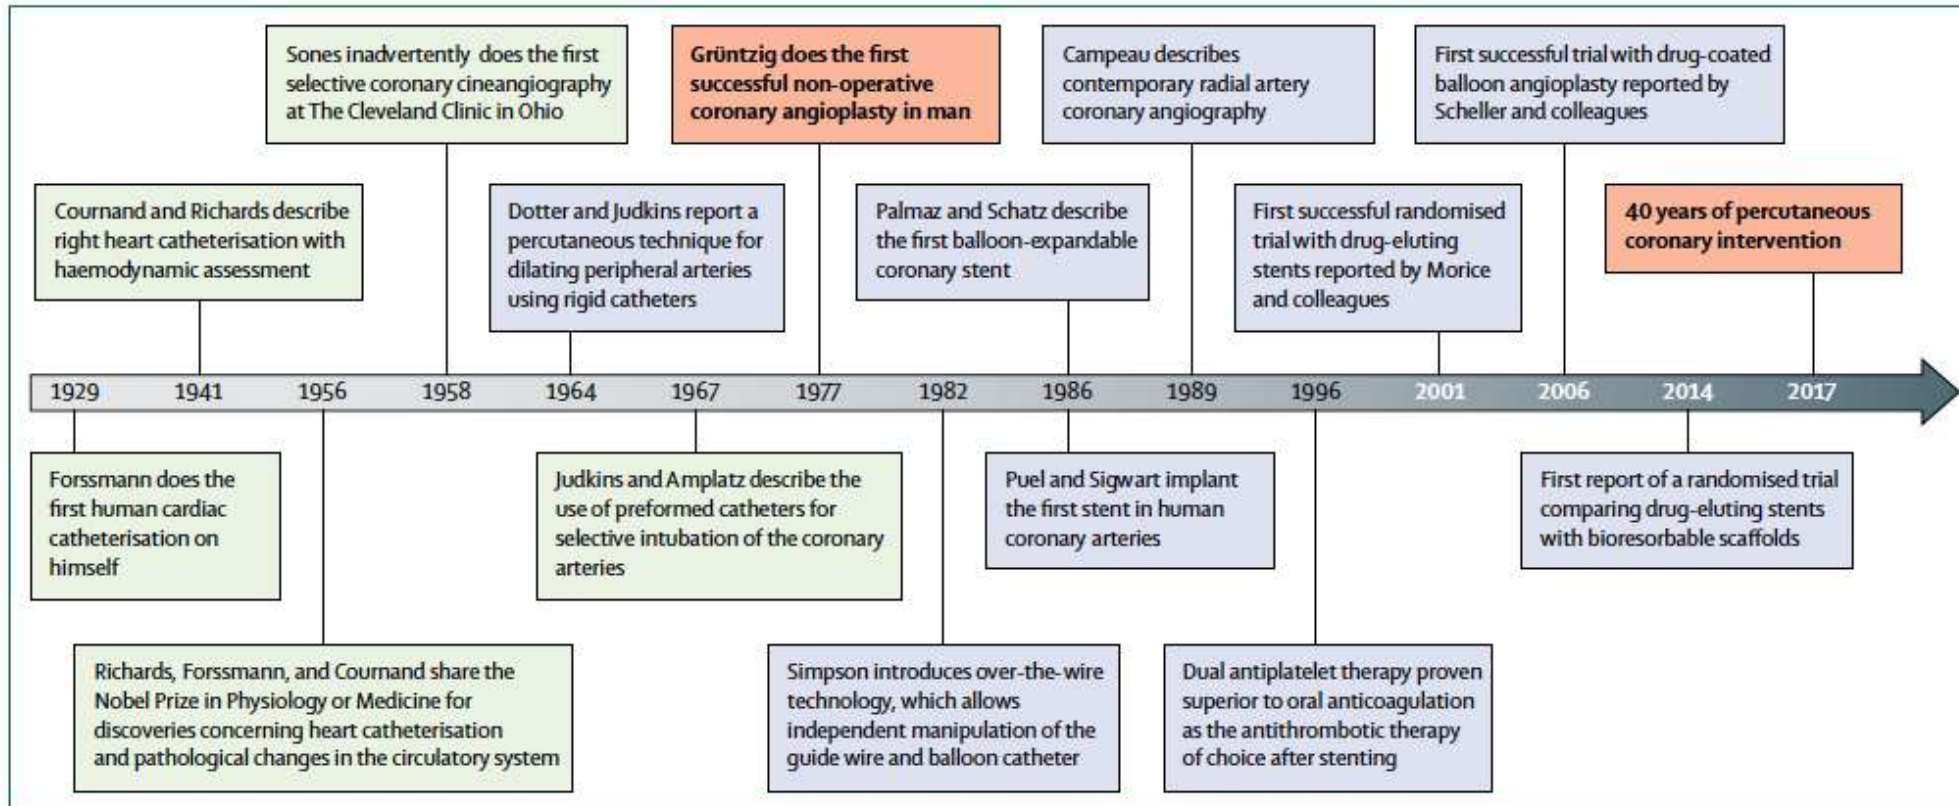

Past

1977 – Gruntzig, 1st balloon angioplasty

1986 – 1st coronary stent

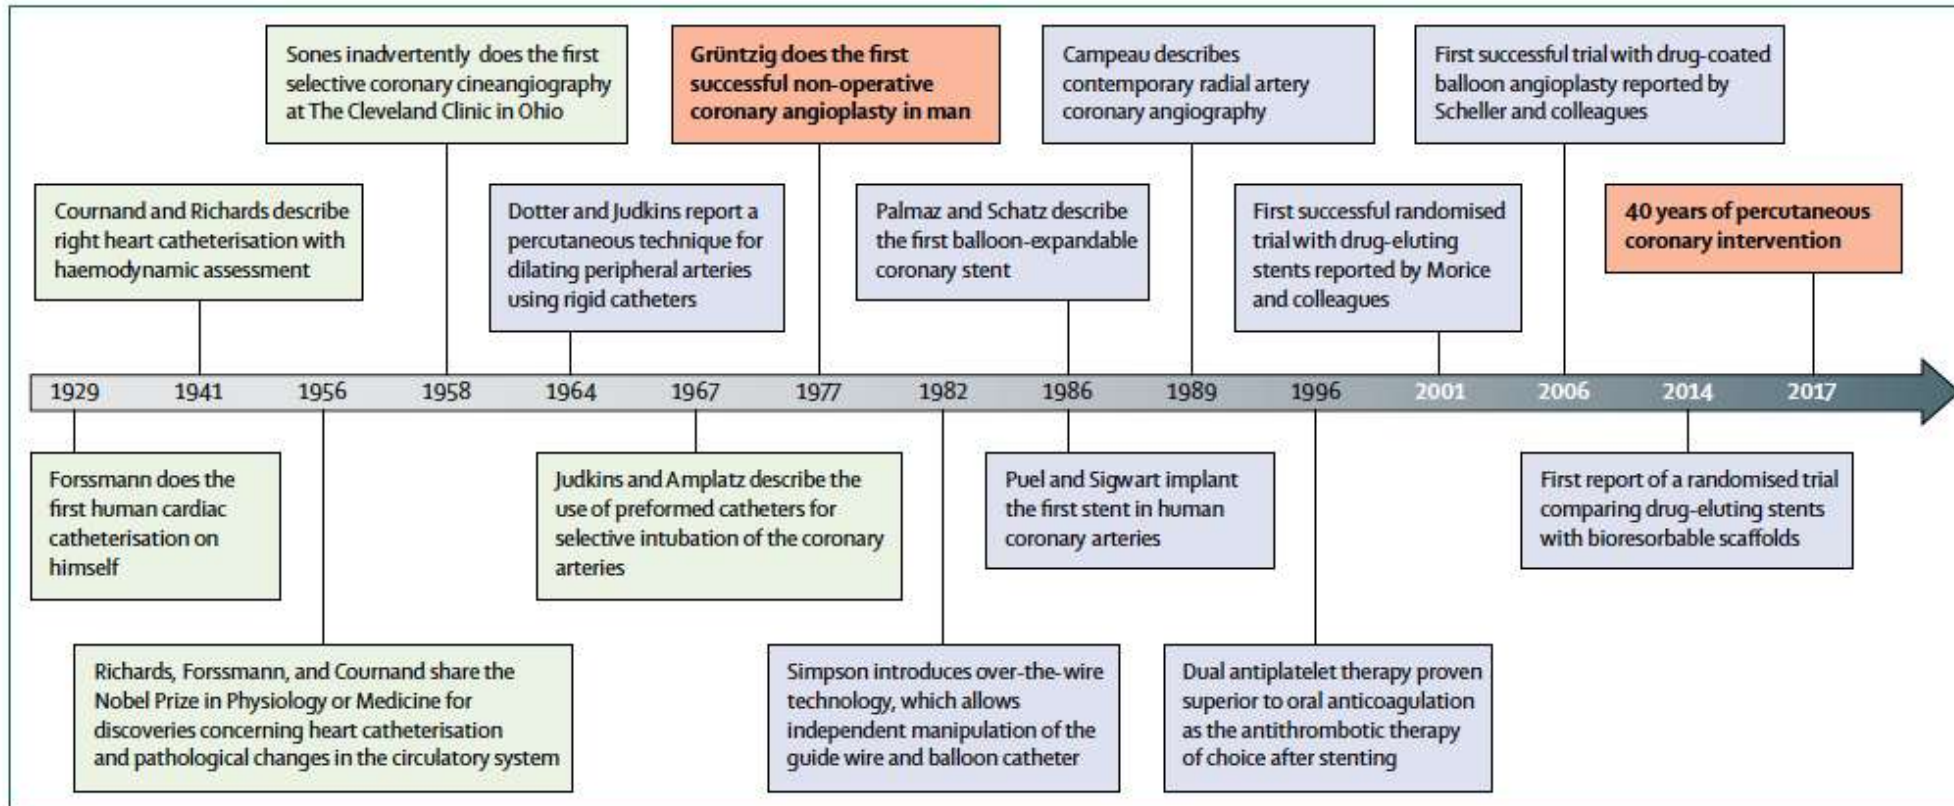

Past

2001- 1st Drug eluting stent

2014- 1st Bioresorbable stent (Absorb)

Past

1984- 1º stent in Portugal

2004- 20 anos angioplastia em Portugal

Present

	Durable polymer-coated stent		Biodegradable polymer-coated stent					Polymer-free drug-eluting stent		Bioresorbable drug-eluting stent
Manufacturer	Abbott/Boston	Medtronic	Biotronic	Terumo	Translumina	Boston	Biosensors	B. Braun	Biosensors	Abbott
Name	Xience/Promus	Resolute	Orsiro	Ultimaster	Yukon Choice PC	Synergy	BioMatrix	Coroflex ISAR	BioFreedom	ABSORB
Material and drug	CoCr/PtCr-EES	CoNi-ZES	CoCr-SES	CoCr-sES	316L-SES	PtCr-EES	316L-BES	316L-SES/probucol	316L-BES	PLLA-EES
Shape										
Strut thickness	81 µm	91 µm	60 µm	80 µm	87 µm	74 µm	120 µm	65 µm	112 µm	150 µm
Coating	Circumferential			Abluminal						Circumferential

Figure 3: Overview of principal characteristics of selected drug-eluting stents and scaffolds

Devices shown have Conformité Européenne-mark approval for use and published trial data from large-scale randomised clinical trials (>1500 enrolled patients) with follow-up of at least 2 years. CoCr=cobalt chromium. PtCr=platinum chromium. EES=everolimus-eluting stent. CoNi=cobalt nickel. ZES=zotarolimus-eluting stent. SES=sirolimus-eluting stent. 316L=marine-grade stainless steel. BES=biolimus A9-eluting stent. PLLA=poly-L-lactic acid

ESC/EACTS GUIDELINES

2018 ESC/EACTS Guidelines on myocardial revascularization

The Task Force on myocardial revascularization of the European Society of Cardiology (ESC) and European Association for Cardio-Thoracic Surgery (EACTS)

Developed with the special contribution of the European Association for Percutaneous Cardiovascular Interventions (EAPCI)

2018 ESC/EACTS Guidelines on myocardial revascularization

The Task Force on myocardial revascularization of the European Society of Cardiology (ESC) and European Association for Cardio-Thoracic Surgery (EACTS)

Developed with the special contribution of the European Association for Percutaneous Cardiovascular Interventions (EAPCI)

Indications for revascularization in patients with stable angina or silent ischaemia

Extent of CAD (anatomical and/or functional)		Class ^a	Level ^b
For prognosis	Left main disease with stenosis >50%. ^{c 68–71}	I	A
	Proximal LAD stenosis >50%. ^{c 62,68,70,72}	I	A
	Two- or three-vessel disease with stenosis >50% with impaired LV function (LVEF ≤35%). ^{c 61,62,68,70,73–83}	I	A
	Large area of ischaemia detected by functional testing (>10% LV) or abnormal invasive FFR. ^{d 24,59,84–90}	I	B
	Single remaining patent coronary artery with stenosis >50%. ^c	I	C

Past...!

2018 ESC/EACTS Guidelines on myocardial revascularization

The Task Force on myocardial revascularization of the European Society of Cardiology (ESC) and European Association for Cardio-Thoracic Surgery (EACTS)

Developed with the special contribution of the European Association for Percutaneous Cardiovascular Interventions (EAPCI)

FAVOURS PCI

Clinical characteristics

Presence of severe co-morbidity (not adequately reflected by scores)

Advanced age/frailty/reduced life expectancy

Restricted mobility and conditions that affect the rehabilitation process

FAVOURS CABG

Clinical characteristics

Diabetes

Reduced LV function ($EF \leq 35\%$)

Contraindication to DAPT

Recurrent diffuse in-stent restenosis

What about left main?

Left main CAD				
Left main disease with low SYNTAX score (0 - 22). ^{69,121,122,124,145-148}	I	A	I	A
Left main disease with intermediate SYNTAX score (23 - 32). ^{69,121,122,124,145-148}	I	A	Ila	A
Left main disease with high SYNTAX score (≥ 33). ^{c 69,121,122,124,146-148}	I	A	III	B

Coronary Angiography and Percutaneous Coronary Intervention After Transcatheter Aortic Valve Replacement

Matias B. Yudi, MBBS,^a Samin K. Sharma, MD,^a Gilbert H.L. Tang, MD, MSc, MBA,^b Annapoorna Kini, MD^a

CENTRAL ILLUSTRATION Coronary Reaccess After TAVR

Factors Impacting Coronary Access

Anatomical

1. Sinotubular junction dimensions
2. Sinus height
3. Leaflet length and bulkiness
4. Sinus of Valsalva width
5. Coronary height

Device and Procedural

1. Commissural tab orientation
2. Sealing skirt height
3. Valve implant depth

Imaging Evaluation

Fluoroscopy

MDCT

Yudi, M.B. et al. J Am Coll Cardiol. 2018;71(12):1360-78.

Summary of factors impacting coronary access and imaging evaluation after TAVR. MDCT = multidetector computed tomography; TAVR = transcatheter aortic valve replacement.

Intermediate

High

Stenosis >70%

Plaque/vessel wall

Noncalcified plaque
Positive remodelling
Low attenuation plaque
Lesion length
Diameter of the distal vessel
...

But Cardiac CT can (should!)
give information beyond
stenosis severity

Thank you for verifying your contributing authorship on "A Machine Learning Framework to Identify Individuals at Risk of Rapid Progression of Coronary Atherosclerosis" submitted by Hyuk-Jae Chang.

EHJ 2019, in press

Future...!

- More structural heart interventions
- Less diagnostic cath vs PCI
- Cardiac CT with machine learning
- ...

Protese aórtica
(2005)

*Come gather 'round people
Wherever you roam
And admit that the waters
Around you have grown
And accept it that soon
You'll be drenched to the bone.
If your time to you
Is worth savin'
Then you better start swimmin'
Or you'll sink like a stone*

For the times they are a-changin'
